

FIP Roadmap

Description:

This is the Final Integrated Project for year-2, semester-1 of the Fanshawe IDP course. This website is a portfolio project for me. Inside it, you can find various projects that I have worked on within the IDP course at Fanshawe. These projects are focused on motion design, product design, and development. Along with the home, gallery and contact pages, there is also an about page that has information about my interests and skills.

Steps:

1. Start with making the base layout of the website using HTML and SCSS
2. Create a database in MySQL for the content on the gallery page
3. Create a contact page and use Pans videos to make it work
4. Connect the database to the website and make sure everything works
5. Upload to hosting site

Considerations:

- when creating the database, make sure to use correct types (varchar/int...) for each item
- make sure to run code through Postman to check if the backend is working correctly
